## Technical Project

### SOCIAL BOOK

DJANGO

[View on GitHub](#)

May. 2022

- A Full stack Twitter Clone built with Django.
- Implemented basic authentication features using Django Auth model.
- Implemented the feature, which enabled users to create, delete, like, edit posts and the ability to follow other users among other features.

### PISURV

REACTJS, TAILWIND AND DJANGO

[View on GitHub](#)

Nov. 2021

- A Personal project created to bridge the gap between companies who need surveys to be filled by users and are willing to pay users to fill them and users who are willing to fill surveys and then be paid.
- Built Restful Api using the Django Rest Framework to implement basic CRUD related tasks.
- Implemented a generic and customizable form with react where companies can dynamically create forms they need user to fill.
- Implemented a state-full application with React context and React reducer to maintain the state of the application.
- Implemented Routing (React Router) and lazy loading techniques to ensure quick loading of the website.
- Integrated payment using the **Pi-Cryptocurrency** to facilitate the transactions.

### CHAT-APP

EXPRESS.JS AND SOCKET.IO

[View on GitHub](#)

Dec. 2021

- An open source project I contributed to, to build a chatroom based application using express.js and socket.io.
