Technical Project

SOCIAL BOOK
DJANGO
- A Full stack Twitter Clone built with Django.
-Implemented basic authentication features using Django Auth model.
-Implemented the feature, which enabled users to create, delete, like, edit posts and the ability to follow other users among other features.

PISURV
REACTJS, TAILWIND AND DJANGO
- A Personal project created to bridge the gap between companies who need surveys to be filled by users and are willing to pay users to fill then and users who are willing to fill surveys and then be paid.
- Built Restful Api using the Django Rest Framework to implement basic CRUD related tasks.
- Implemented a generic and customable form where companies can dynamically create forms they need user to fill.
- Integrated payment using the **Pi-Cryptocurrency** to facilitate the transactions.

CHAT-APP
EXPRESS.JS AND SOCKET.IO
- An open source project I contributed to, to build a chatroom based application using express.js and socket.io.
