IBUKUNOLUWA OYENIYI

Senior Software Engineer

Backend Systems | Full Stack and Mobile | Applied AI

Lagos, Nigeria | ibukun46@gmail.com | LinkedIn | GitHub | LeetCode

PROFILE

Senior software engineer and frontend team lead with substantial backend ownership across APIs, data processing, and service integration. Leads approximately five engineers, with three years of team leadership, and owns the AgricOS multi-tenant configuration frontend serving tens of thousands of users across Nigeria. Spearheads AI-assisted engineering across teams, combining tool selection, reusable workflows, and technical judgment to accelerate delivery. Delivered 20+ projects and workstreams at Babban Gona and earned Developer of the Year.

PROFESSIONAL EXPERIENCE

Babban Gona | Full Stack Engineer and Frontend Team Lead

Jan 2023 - Present | Hybrid

- **Team leadership and platform ownership.** Lead a frontend team of approximately five engineers, with three years of leadership responsibility. Own delivery of the AgricOS multi-tenant configuration platform, covering organization and program administration, staff, roles, and operational workflows across Nigeria.
- **AI adoption across engineering.** Spearhead the integration of AI-assisted workflows across multiple engineering teams. Help engineers choose tools suited to implementation, debugging, testing, and review; establish reusable repository context and validation practices so AI-assisted work can be checked and integrated reliably.
- **Frontend architecture and configurable workflows.** Build React/Next.js configuration experiences with reusable components, typed API adapters, React Query, and validated forms. Deliver workflow configuration for enrollment, input distribution, portfolio meetings, staff assignments, and operational audits, connecting administrative decisions to field operations.
- **Expanded backend ownership.** Grew beyond frontend delivery into backend implementation and cross-service design spanning Config, Entity, Workflow, Inventory, and IAM. Resolve identity, permission, and assignment failures across API gateways, persistence, and mobile synchronization.
- **Database performance and scalability.** Identified inefficient aggregation and opportunities to improve index usage in Program Config Service, working with backend engineers on pagination and query optimization. A controlled 20,000-record benchmark showed median request latency falling from 13.7 seconds to 45.5 milliseconds.
- **Large-scale data integration.** Built React/Next.js applications and Python services across agricultural operations, payments, inventory, and internal platforms, including Odoo integrations synchronizing tens of millions of records.
- **Rapid end-to-end delivery.** Designed and delivered the export service in under one week, spanning frontend integration, PostgreSQL-backed asynchronous jobs, recoverable workers, streamed CSV generation, tenant-scoped permissions, and private downloads.

AI AND PRODUCT ENGINEERING

Master Anything | Founder and Product Engineer

2026 - Present | Remote

- **AI product ownership.** Founded and built an AI-powered learning platform that translates a learner's goals, experience, and available study time into personalized roadmaps, structured curricula, assessments, and progress tracking.
- **Full product delivery.** Built with Next.js, React, TypeScript, Convex, Clerk, and AI model integrations, owning application architecture, authentication, data flows, user journeys, and browser-based verification.

MOBILE ENGINEERING

PennyTots | Mobile and Full Stack Developer

Jun 2023 - Present | Remote

- **Mobile and backend delivery.** Built a React Native community application with real-time chat, profiles, following, push notifications, deep links, and payment integrations.
- **Real-time reliability.** Hardened unread state, pagination, group messaging, and helpdesk notifications across React Native, Expo, Node.js/NestJS, GraphQL/REST, MongoDB, Socket.IO, and AWS.

Wholeflo | Independent product. Built an offline-first mobile wellbeing application using React Native, Expo Router, and SQLite, with secure local data, optional synchronization, notifications, localization, biometric protection, and RevenueCat subscriptions.

TECHNICAL EXPERTISE

Backend and data: TypeScript, Node.js, NestJS, Python, PostgreSQL, MongoDB, Redis, REST, GraphQL, asynchronous jobs, streaming, multi-tenant authorization

Web and mobile: React, Next.js, React Native, Expo, SQLite, offline-first applications, real-time messaging

AI engineering: LLM integrations, personalized learning systems, agent-assisted development, reusable repository context and tooling workflows

Delivery and quality: GCP, AWS, Docker, GitHub Actions, Playwright, SonarQube, integration testing, end-to-end verification

ALGORITHMS AND PROBLEM SOLVING

LeetCode | leetcode.com/ibkay998

Solved 574 problems, including 309 Medium and 69 Hard. Practiced on 346 days in 2022, recording 905 submissions; earned LeetCode's 365 Days and 500 Days badges.

EARLIER EXPERIENCE

HNG Internship | Frontend and Backend Intern | 2022

Built FastAPI authentication endpoints, React pages, and a Telegram bot for Streetrates.

Tuteria | Frontend Developer Intern | Jun - Dec 2018

EDUCATION

University of Lagos, Nigeria | B.Sc. Civil Engineering | Jan 2022

HOW I WORK

I look for problems worth solving, including those outside my assigned scope. At Babban Gona, I spearhead AI-assisted engineering across teams, helping engineers choose effective tools and turn them into practical delivery workflows. I bring that same initiative to architecture, performance, and product delivery, taking responsibility for the whole solution.
